PROBLEM IDENTIFICATION ASSIGNMENT

Scenario Bases Learning

A company works with number of employees, all the works are dependents on the employees. Even if one of the employees resign the job immediately then assigned work will be not finished at the time, so delivery of the project to the clients will be delayed. Company planned to make solution for this, they want to know which employee may resign next. If they know previously, they can arrange alternative to avoid such problem. As an AI Engineer you must give Solution to this.

1. How will you achieve in this AI ?

    I) Collect Employee Data from the company
    II) Prepare dataset
    III) Process with AI Modals like ML or DL or NLP .
    IV) Predict future resignations
    V) Then make call to action process

2. Find out 3-stages of Problem Identification

    I) Domain Selection : Dataset is number so domain is Machine Learning
    II) Learning Method : We have input data and output is clear so Supervised
    III) It is Categorical data so use Supervised Classification .

3. Name of the Project
    Employee Attrition Prediction

4. Create Dummy Dataset

Employee ID	Age	Department	Salary	Years_at_company	Overtime	Promotion_Last_2years	Job Satisfaction	Resignation (Label values)
1001	26	IT	35000	2	Yes	No	Low	Yes
1002	28	Finance	60000	6	No	Yes	High	No
1003	25	Sales	38000	3	Yes	No	Low	Yes
